

a) Naive ggplot

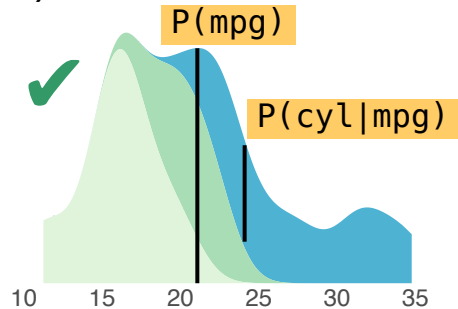

```
ggplot(mtcars) +
  geom_density(
    aes(x = mpg,
        y = stat(density),
        fill = cyl),
    position = "stack")
```

b) ggplot: corrected

```
ggplot(mtcars)+
  geom_density(
    aes(x = mpg,
        y = stat(density*n),
        fill = cyl)),
  position = "stack")
```

c) PGoG

```
ggplot(mtcars) +
  geom_bloc(
    aes(x = mpg,
        height = P(cyl|mpg)
              P(mpg),
        fill = cyl))
```
